SUMMARY

Full-stack engineer with 9+ years taking products from first prototype to production, across both large enterprises and fast-moving startups, so I'm at home owning ambiguous scope and making the call under pressure. I write production code on both sides of the stack: frontend in React, Next.js, and TypeScript, and backend in Python, Kotlin/Spring Boot, and Go. Right now I co-found Vehicularis, where I build and ship privacy-first LLM and edge-AI products, including an LLM chatbot that runs entirely in the browser, and I work directly with users to turn how a model behaves into something they actually adopt. Based in Stockholm.

CORE SKILLS

Languages	Python, JavaScript / TypeScript, Kotlin, Go, Dart, Swift, Java
AI / LLMs	In-browser LLM chatbots, on-device & edge AI, generative-AI pipelines (Whisper, transformers, summarization, TTS, vision), applied ML
Frontend	React, Next.js (SSR), Flutter (Web / iOS / Android), WebRTC, Figma
Backend	Spring Boot, Django, Node, REST APIs, microservices, Kafka streams, real-time and event-driven systems
Cloud & Infra	AWS (serverless, Kafka, Activate), GCP (BigQuery, Cloud Functions), Grafana, Microsoft Entra ID, Firebase

HOW I WORK

- AI-first development.** I build with AI in the loop every day, using LLMs and coding agents to prototype faster and ship features that are AI-native rather than bolted on at the end, leaning on quick evals and real usage to tell whether a change actually helped.
- Planning and sequencing.** I tackle the riskiest, most ambiguous parts first, break work into clear milestones, and get a thin version running early so we can react to something real instead of a plan on paper.
- Trade-offs and risk.** I make the scope-versus-speed-versus-quality call out loud, surface risks early, and keep momentum by clearing blockers fast.

EXPERIENCE

Software Engineer · Aira Oct 2024 – Present

Stockholm, Sweden. Clean-energy scale-up helping more of Europe switch to heat pumps.

- Build the backend behind Aira's heat-pump fleet operations in **Kotlin (Spring Boot) on AWS**, moving large volumes of device telemetry through **Kafka streams**.
- Set up fleet observability in **Grafana**, including a **Grafana MCP server**, and handled identity with a **Microsoft Entra ID** integration.
- Helping move core services from Kotlin to **Go** for better performance.
- Build features for the field Installer app (**Flutter**) that technicians use on site, so the backend work stays connected to what's happening in the field.

Co-Founder & Engineer · Vehicularis 2025 – Present

London, UK / Stockholm (Remote). Privacy-first edge-AI and IoT for connected vehicles and browsers.

- Co-founded the company and build the products end to end, owning everything from the architecture to the frontend across teshub and TabTasker.
- Built an **LLM chatbot that runs entirely in the browser on the edge**, with no servers and nothing leaving the user's device.
- Design **AWS** pipelines that take in high volumes of connected-vehicle telemetry and process it at low latency, built to UK/EU GDPR and CCPA standards.
- Got the company into **AWS Activate** and **NVIDIA Inception**, and we're working with Sabancı University on AI/ML for connected vehicles.

Full-Stack Developer · Done (Done Sweden AB)

Jun 2020 – Oct 2024

Stockholm, Sweden. Two-sided marketplace connecting customers with professional installers.

- Led the planning and delivery of full-stack features across the marketplace, owning both the frontend and the backend pieces.
- Built the partner and operations back-office and the customer booking flow in **Next.js**.
- Shipped the customer and installer apps in **Flutter** across Web, iOS, and Android, with in-app video over **WebRTC** and Swish payments built in.
- Designed and looked after the **GCP** services (BigQuery, Cloud Functions, invoicing) that kept everything reliable as it grew.

Co-Founder & Lead Developer · Rasyonel App

2018 – 2021

Istanbul, Turkey. A study-prep app for students heading into university.

- Co-founded it and led the development of an app that reached **#1 paid app in Turkey** on both the App Store and Google Play (Q4 2018).
- Owned the **iOS and Android** frontend from the first idea all the way to launch.

Software Engineer · Valensas Technology Services

Sep 2017 – Jun 2019

Istanbul, Turkey. Mobile consultancy building apps for big enterprise clients.

- Led the Android team building production apps for major Turkish banks and insurers (**Akbank, Ergo, TFKB**), including a P2P money-transfer app.
- Built a **Spring Boot** authentication microservice to tighten up security for the banking apps.
- Worked directly with client stakeholders to scope and shape each solution, my first real taste of **customer-facing delivery** under tight deadlines.

SELECTED PROJECTS

TabTasker · in-browser AI & productivity suite

tabtasker.com

- A privacy-first set of **50+ browser tools** where everything runs on the user's own device. No uploads, no sign-up, and it works offline.
- The centerpiece is an **LLM chatbot that runs fully in the browser on the edge**. I chose and evaluated the on-device models for quality, size, and latency, then built generative-AI pipelines around them: **Whisper** speech-to-text, DistilBART summaries, SpeechT5 text-to-speech, image captioning (BLIP / CLIP), and turning a PDF into a narrated podcast.
- Built peer-to-peer file sharing and video calls over **WebRTC** plus a verifiable e-signature ledger, so I owned the whole thing from the model down to the UX.

teshub · connected-vehicle telemetry platform

teshub.app

- Turns raw connected-vehicle data into useful, AI-driven metrics, running on an **AWS** pipeline built for low latency and privacy from the start.

EDUCATION

Master's studies in Computer Science, Uppsala University, Sweden (2019 – 2021)

Coursework completed; thesis not presented. Research area: algorithmic, starvation-avoiding matching in marketplaces.

B.Sc. in Computer Engineering, Koç University, Istanbul (2011 – 2017)

SPEAKING & COMMUNITY

- Speaker at the Flutter Stockholm meetup (2022), on full-text search integration.
- Crew at the Flutter & Friends conference in Stockholm (2023 and 2024).
- Teaching assistant for Android programming at Koç University, and a section leader on the Stanford / Koç CS bridge program.

LANGUAGES

- Turkish (Native)
- English (Full professional)
- Swedish (Elementary)
- German (Elementary)
